

Rethinking How People Matter - A space for disruptive minds, built by disruptive minds

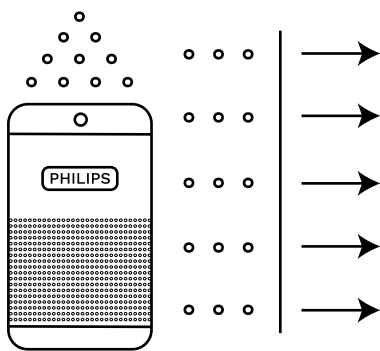

Paddington Works has introduced COVID-19 modifications to ensure 'Best in Class' health and safety measures are in place. Informed by science and adhering to WHO and UK government guidelines, we have introduced unique and smart systems designed to reassure and build confidence in the Paddington Works building.

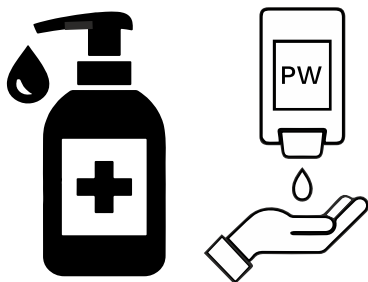

An automatic front entrance door opening has a generous threshold for entering and leaving.

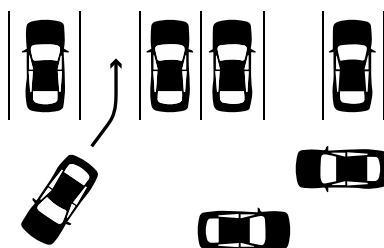

Our way-finding traffic-influenced concept for 'social distancing' indicates routes around the building. We have fixed convex mirrors on our staircases to support social distancing.

The air circulation system (air socks) brings at least 25% more air than other commercial spaces. Combined with the new Philips Air Purifiers we are able to affect an air change to a minimum of every 22 minutes in the communal open areas. We have over 54 Philips Air Purifiers and placed one in every enclosed space throughout the building, these remove 99.97% of airborne viruses and allergens.

Our bespoke designed Copper Alloy free-standing hand sanitiser is antimicrobial, with a foot pedal that accesses a PPE bin. Our hand sanitiser dispensers contain SteriZAR hand sanitiser gel with no alcohol, proven to kill viruses in seconds giving an immediate fresh and clean feel to the skin. SteriZAR remains effective for at least 6 hours using Advanced Barrier Control.

We offer our members unlimited underground car parking, with 24 hr manned security, so everyone can drive to work and avoid public transport if required. Scooters/bikes, if parked 4-up, will only be charged at £2.50 per 24 hours.

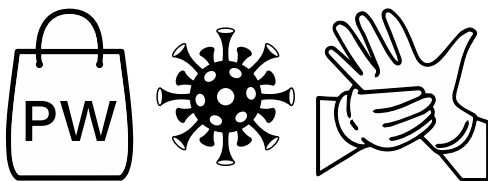

We have created innovative 'traffic-light toilet systems' to indicate occupancy and safe use, to minimise queueing and touch points.

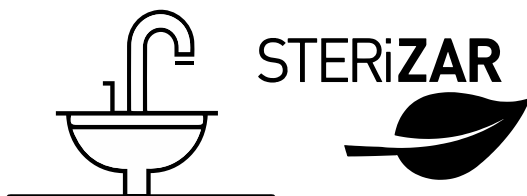

Our coffee machines and microwaves have been spread out in the kitchen areas to enable safer use.

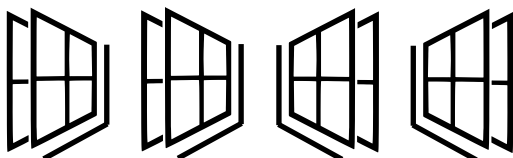

WHO approved COVID-19 sterilising machines, Saniswiss and SteriZar mist/fogging solutions. We have increased our cleaning services in the building by more than 40% per day, 5 days a week.

We have put together a PW Member COVID-bag that contains: our own PW designed snoods, Honeywell safety glasses, 5 masks and 5 pairs of gloves to support safe commuting and additional protection.

We have strategically placed extra plumbed-in hand-washing sinks around the building, which along with our washrooms, have SteriZAR antibacterial hand wash solution in each.

All our desks are divided by safety glass screens to protect against airborne particles from sneezing or coughing.

All members and visitors can use our Thermal Body Temperature scanner to check their temperature at our Front Desk. If your body temperature is more than 37.8°C, then this is classified as a fever.
